

HERBAL HAIR OIL & RO DRINKING WATER — KARACHI

Al Aeraf

Website & Admin Dashboard — Complete User Manual

Prepared for: Al Aeraf

Prepared by: Invergo Design

Covers: Customer website, customer account area, and the full admin dashboard

Reflects build as of: September 2026 (subscription system + RO plant delivery-eligibility live)

Table of Contents

HOW TO READ THIS MANUAL

Legend — what "Live" and "Not Yet Available" mean

PART ONE — THE CUSTOMER WEBSITE

1. Site map — every public page
 2. Browsing & shopping — Hair Oil and RO Water pages
 3. Cart
 4. Checkout & Cash on Delivery orders
 5. Creating an account, logging in, resetting a password
 6. My Account — profile, addresses
 7. Monthly RO Water subscriptions (customer side)
 8. Delivery areas & delivery eligibility, explained simply
-

PART TWO — THE ADMIN DASHBOARD

9. Logging in as admin, and how admin access works
 10. Dashboard overview
 11. Managing categories
 12. Managing products (incl. photos)
 13. Managing orders
 14. Managing subscriptions & subscription plans
 15. RO Plants & the delivery-eligibility system
 16. Sections still under construction (Customers, Settings)
-

PART THREE — GOOD TO KNOW

17. How payments work today (Cash on Delivery only)
 18. Security & who can do what
-

19. Known gaps & recommended next steps before full public launch

20. End-to-end testing guide — walking one order and one subscription through the whole system

How to read this manual

Every feature below is marked so you always know exactly what customers and admins can rely on today:

MARKING	MEANING
LIVE	Fully built and working right now — customers or admins can use this today, no exceptions.
NOT YET AVAILABLE	The menu item exists in the dashboard so nothing looks broken or missing, but the screen behind it is a placeholder. These are called out clearly in Part Two, Section 16, and in the Known Gaps list at the very end.

NOTE — This manual only describes features that were verified directly against the live website and database. Nothing here is a guess about how something "should" work — every step was checked against the real, working system.

The Customer Website

1. Site map — every public page

PAGE	WHAT IT'S FOR
Home (/)	Brand story, hair oil & water highlights, subscription promo, delivery-area teaser, testimonials — a landing page that links out to the real shopping and account pages.
Hair Oil (/hair-oil)	Full hair-oil story plus the real, live shop section for hair-oil products.
RO Water (/ro-water)	Full water story plus the real, live shop section for RO-water products.
About (/about)	Brand story — informational only.
Contact (/contact)	Phone, address and contact channels.
FAQs (/faqs)	Common questions about hair oil, water and subscriptions.
Delivery Areas (/delivery-areas)	A map and list of the neighbourhoods Al Aeraf currently talks about serving.
Subscription (info page) (/subscription)	A marketing/overview page explaining how subscriptions work in general.
Cart (/cart)	Review items added from the shop before checking out.
Checkout (/checkout)	Choose delivery address and place a real Cash-on-Delivery order.
Subscribe (/subscribe)	Set up a real, working monthly RO-water subscription.
Sign Up / Login / Forgot Password / Reset Password	Account creation and access.
My Account (/account , /account/addresses , /account/subscriptions)	Profile, saved delivery addresses, and subscription management.

IMPORTANT — Two pages currently contain outdated wording that should be updated before you send customers to them: the **Contact** page still says "online ordering isn't live yet — every order is set up over a call or message," and the **Subscription** info page's buttons currently link to Contact instead of to the real Subscribe page. Both statements were

true earlier in development but are no longer accurate — ordering and subscribing online both work today. This is a one-line content fix on each page whenever you're ready; see Section 19 for the full list.

2. Browsing & shopping — Hair Oil and RO Water pages LIVE

Both the Hair Oil and RO Water pages show the brand story first, then a real product shop section further down the page, pulling directly from what's in the admin Products screen (Section 12) — so anything you add, price, or mark out of stock there appears here automatically, with no extra step.

- Each product card shows its photo, name, size (e.g. "100ml" or "19L"), and price.
- If a product has a "compare-at" price set higher than its real price, an **"On Sale"** badge appears automatically.
- If a product is marked **Out of Stock** in the admin panel, the card shows "Out of Stock" and the Add to Cart button is disabled — customers simply cannot add it.
- If a product is marked **Pre-order**, that label shows instead.
- Clicking **Add to Cart** adds the item to the customer's cart immediately, without leaving the page.

NOTE — The big banner button at the very top of each page ("Call to Order") dials the Al Aerof phone number directly — it is a phone-call shortcut, separate from the Add to Cart shopping flow below it.

3. Cart LIVE

The cart lives in the customer's own browser (not on the server), so it's private to that device and stays there even if they close the tab and come back later — until they clear it or place an order.

- On the Cart page, customers can change quantity (1–20 per item), remove a single item, or clear the whole cart.
- Every time the Cart page loads, it double-checks prices and stock against the live catalog. If a product's price changed, or it was deactivated or sold out since it was added, the cart flags it clearly.
- Customers cannot proceed to checkout while any item is flagged unavailable — they must remove it first.

4. Checkout & Cash on Delivery orders LIVE

Checkout requires the customer to be logged in — if they're not, they're sent to log in first and brought right back.

- 1 Choose a saved delivery address, or add a new one on the spot (same address form as My Account → Addresses, Section 6).
- 2 The system checks — for that exact address — whether it falls inside the delivery range of an active RO Plant (see Section 8 and Section 15 for how this works). Only deliverable addresses can be selected.
- 3 Review the order, optionally add a delivery note (e.g. "call before arriving," "leave with security guard").
- 4 Payment is **Cash on Delivery only** — there is no card or online-payment option to choose, and delivery is currently shown as free.

- 5 Click **Place Order**. The system re-checks everything one more time on the server — the address really belongs to that customer, the address is really deliverable, and every item's price is taken fresh from the live catalog (never from what the browser sent) — before the order is created.
- 6 Customer is taken to an order confirmation page showing their order number, items, total, delivery address, and a reminder that payment is collected in cash at delivery.

NOTE — Every order gets a readable order number (e.g. **AL-000001**) and is automatically assigned to whichever RO Plant is nearest and eligible to deliver to that address at the moment the order is placed.

5. Creating an account, logging in, resetting a password LIVE

Sign Up

Full name	Required
Email	Required, must be a valid email address
Phone	Optional
Password / Confirm password	Required, minimum 8 characters, both must match

Depending on how email confirmation is configured for the project, a new customer either lands straight in their account, or sees a "check your email to confirm" message first. Either way, their account and profile are created immediately on signup.

Login

Email + password. A wrong password or an unconfirmed email both show a clear, specific message rather than a generic error.

Forgot / Reset Password

- 1 Customer enters their email on the Forgot Password page.
- 2 They receive a password-reset email (sent automatically by the system) with a secure link.
- 3 Clicking the link brings them to the Reset Password page, where they set a new password (minimum 8 characters, must match confirmation).
- 4 They're taken straight into their account.

NOTE — For privacy, the "Forgot Password" page always shows the same generic success message whether or not that email actually has an account — this prevents someone from using the form to check who's a registered customer.

6. My Account — profile, addresses LIVE

Profile

Customers can view their name, email and member-since date, and edit their full name and phone number. Nothing about a customer's account role or permissions can ever be changed from this form.

Delivery Addresses

Customers can save any number of delivery addresses and mark one as their default. Adding or editing an address uses this form:

Recipient name	Required
Phone	Required
Address line	Required
Area	Optional
Delivery notes	Optional (e.g. landmark, gate code)
Location (latitude/longitude)	Optional, but required for that address to be usable at checkout/subscribe. A "Use my current location" button fills this in automatically from the customer's phone/browser GPS.
Set as default	Optional checkbox

IMPORTANT — An address with no location pin cannot be selected for checkout or a subscription — the customer will need to edit it and add a location (or use "Use my current location") before delivery can be verified for it.

7. Monthly RO Water subscriptions (customer side) LIVE

This is a real, working recurring-delivery setup for RO drinking water — separate from the informational `/subscription` marketing page mentioned in Section 1. Subscriptions are for RO Water only; hair oil is never offered as a subscription.

Setting up a subscription (`/subscribe`)

- 1 Customer must be logged in.
- 2 Choose a subscription plan (plans and their delivery frequency — weekly, fortnightly or monthly — are set up by the admin in Section 14).
- 3 Choose the RO Water product and quantity (1–20).
- 4 Choose a saved, deliverable address — same live delivery check as checkout.

- 5 See the computed monthly price and a note that payment is cash on each delivery, not charged online now.
- 6 Submit — the system re-validates everything on the server (login, plan, product availability, address ownership, delivery eligibility) before creating the subscription, and works out the first delivery date from the plan's frequency.

Managing an existing subscription (/account/subscriptions)

Each subscription shows its plan, water item and quantity, monthly price, delivery address, next delivery date, and current status. Available actions depend on status:

CURRENT STATUS	CUSTOMER CAN
Active	Pause, or Cancel
Paused	Resume, or Cancel
Cancelled	Nothing — this is final; a new subscription must be started from scratch

NOTE — A subscription's items, address or quantity cannot currently be edited by the customer once created — only its status (pause/resume/cancel). To change what's being delivered, cancel and start a new subscription, or ask the admin to make the change from the dashboard.

IMPORTANT — There is no automatic monthly billing or automatic order creation anywhere in the system (there's no payment gateway attached). Every actual delivery for a subscription has to be generated by an admin, one cycle at a time — see Section 14.

8. Delivery areas & delivery eligibility, explained simply

LIVE (ELIGIBILITY CHECK) / INFORMATIONAL (AREA PAGE)

Behind the scenes, every RO Plant has a real map location and a delivery radius (in kilometres). Whenever a customer picks an address for checkout or a subscription, the system draws an invisible circle of that radius around each active plant and checks whether the address's pin falls inside any of them:

- **Inside the circle** → address is marked deliverable, and that plant is the one assigned to fulfil the order.
- **Outside every plant's circle** → the address cannot be used for checkout or a subscription until either the address's location is corrected, or a plant with wider or nearer coverage is added.

The public **Delivery Areas** page lists named neighbourhoods (e.g. Nazimabad, North Nazimabad) as a friendly, human-readable guide for visitors — it is separate marketing copy and isn't the thing making the actual pass/fail decision; the live radius check described above is what really decides, address by address, at the moment someone tries to order.

The Admin Dashboard

9. Logging in as admin, and how admin access works LIVE

- 1 Go to `/admin/login`.
- 2 Enter the email and password of an account that has been granted admin access.
- 3 If the account isn't an admin, you'll see "This account doesn't have admin access" and you're signed straight back out — a non-admin session is never left active after this.

IMPORTANT — There is no signup form or self-service way to become an admin from the website — admin access can only be granted by directly updating that person's account in the Supabase database. If you need a new team member added as an admin, this has to be done for you (or by whoever manages the database) each time.

Every screen under `/admin` is protected twice over: once by the dashboard itself (no valid admin session → redirected out immediately), and again at the database level, which independently refuses to let a non-admin change any admin-only data even if somehow the dashboard were bypassed.

10. Dashboard overview LIVE

The first screen after logging in shows live counts, pulled fresh from the database every time: Total Products, Active Products, Total Categories, Total Orders, Pending Orders (highlighted if any are waiting), and Active Subscriptions.

11. Managing categories LIVE

Categories group products (e.g. "Hair Oil," "RO Water"). From the Categories screen:

Name	Required
Slug (URL name)	Auto-filled from the name, editable, must be unique
Description	Optional
Image URL	Optional
Active	Toggle on/off directly from the list
Sort order	Controls display order

NOTE — A category can't be deleted while any products still belong to it — the system tells you this clearly rather than letting you accidentally orphan products. Move or reassign its products first, or simply mark the category inactive instead of deleting it.

12. Managing products (incl. photos) LIVE

Product list

Paginated (20 per page), searchable by name, and filterable by category and by status (all / active / inactive). Active and Featured can each be toggled directly from the list without opening the product.

Add / Edit a product

Name	Required
Slug	Auto-filled from name, editable, must be unique
Category	Required, chosen from your active categories
Product type	Hair Oil or RO Water
Short description	Optional — used in compact listings
Full description	Optional — used on the product's own detail area
Price	Required, PKR, zero or more
Compare-at price	Optional — set higher than Price to automatically show an "On Sale" badge
Size / volume label	e.g. "100ml", "19L"
Stock status	In Stock / Out of Stock / Pre-order
Active	Toggle — inactive products never appear on the public site
Featured	Toggle — for highlighting a product
Sort order	Controls display order within its category page

Product photos

Available once a product has been created (on its Edit page):

- **Upload** — accepts JPEG, PNG, WEBP or AVIF, up to 5MB per photo.
- **Reorder** — move photos earlier/later with up/down arrows. The **first photo is always the product's main cover photo**, marked "Primary" in the dashboard.
- **Delete** — removes a photo permanently, both from the listing and from storage.

Deleting a product

IMPORTANT — A product cannot be deleted while it's referenced by an existing order or subscription — the dashboard will tell you this and suggest marking it Inactive instead, which hides it from the site while keeping historical orders intact and accurate.

13. Managing orders LIVE

Order list

Paginated, searchable by order number or customer name/phone, and filterable by order status, payment status, RO Plant, and date range.

Order detail page

Shows every line item, subtotal/delivery fee/total, the delivery address and notes, the customer's contact details, and the RO Plant this order was assigned to when it was placed (this stays fixed — it's not re-assigned later even if plant coverage changes). A live badge also shows whether that address is *currently* in or out of delivery range right now, which can occasionally differ from the assignment made at order time if plant coverage has since changed.

Changing status

FIELD	OPTIONS
Order status	Pending → Confirmed → Processing → Out for Delivery → Delivered, or Cancelled at any point
Payment status	Unpaid / Paid / Refunded — for your own record of cash collected, since there's no payment gateway involved

These are two separate controls on the order page, so updating one never accidentally changes the other.

14. Managing subscriptions & subscription plans LIVE

Subscriptions list & detail

Paginated and searchable/filterable the same way as orders. The detail page shows the water item and quantity, monthly price, delivery address and notes, next delivery date, customer contact, and a live in/out-of-range delivery badge.

Changing a subscription's status

Unlike a customer, an admin can set a subscription to **any** of the three statuses at any time — including reactivating a cancelled one, which a customer can never do themselves.

Generating a delivery ("Generate This Month's Delivery")

IMPORTANT — This is the single most important recurring admin task in the whole system: because there is no payment gateway to auto-charge customers, **no subscription delivery order is ever created automatically**. For every active subscription, an admin must open it and click "**Generate This Month's Delivery**" each time that customer's delivery is due. This button is only enabled while the subscription is Active. Clicking it re-checks the address is still deliverable, takes the product's current price fresh from the catalog, creates a real order for that delivery (visible in the regular Orders screen, Section 13, marked with the note "Subscription delivery"), and automatically moves the subscription's next delivery date forward by its frequency.

Subscription Plans

Plans are what customers choose from on the Subscribe page. Manage them from Subscriptions → Manage Plans:

Name	Required
Slug	Auto-filled, editable, unique
Description	Optional
Default frequency	Weekly, Fortnightly, or Monthly
Active	Toggle — inactive plans can't be chosen for new subscriptions
Sort order	Controls display order

NOTE — A plan has no price of its own — the price a customer sees and pays is always calculated live from the RO-water product's current price at the time they subscribe (and again, freshly, every time a delivery is generated). Changing a product's price never silently changes what existing subscribers already agreed to for a delivery already generated — it only affects new subscriptions and deliveries generated from that point forward.

NOTE — A plan can't be deleted while any subscription still uses it — mark it Inactive instead if you want to retire it.

15. RO Plants & the delivery-eligibility system

ADMIN SCREEN NOT YET AVAILABLE — but the underlying system it would manage is fully live and already running the real delivery checks described in Section 8.

NOT YET AVAILABLE — The **RO Plants** item in the sidebar currently opens a "Coming Soon" placeholder — there is no screen yet to add, edit, or view plant locations and delivery radii from the dashboard. Until that screen is built, any change to plant locations, radii, or active status has to be made directly in the database by your developer.

What a plant record actually holds, for your reference: a name, an address (for your own notes), a map location (latitude/longitude), a delivery radius in kilometres (5km unless set otherwise), and an active/inactive flag. Only active plants are ever considered when checking whether an address can be delivered to.

IMPORTANT — One real plant record has already been added for you as a starting point — "**Al Aeraf RO Plant — Nazimabad**", active, with a 7km delivery radius, so that Nazimabad, Paposh Nagar, North Nazimabad and Sakhi Hasan are realistically covered. Its map pin is currently a general Nazimabad-area placeholder (it was intentionally not set to a precise street address, since that wasn't provided), and its 7km radius may not fully reach Orangi Town or Allama Iqbal Town, which sit roughly 8–10km away. Please confirm the exact plant address/GPS pin with your developer so it can be corrected, and decide whether you want a wider radius or a second plant to properly cover the western/southern areas.

16. Sections still under construction

SIDEBAR ITEM	STATUS	WHAT IT WILL DO ONCE BUILT
Customers	COMING SOON	A directory of registered customers and their order history. Right now, customer information can only be seen indirectly through individual orders/subscriptions.
RO Plants	COMING SOON	Add/edit/view plant locations and delivery radii from the dashboard (see Section 15).
Settings	COMING SOON	Store-wide configuration and preferences. No settings screen of any kind exists yet.

Good to Know

17. How payments work today

Cash on Delivery is the only payment method anywhere in the system — for one-off orders and for every subscription delivery. There is no card payment, no online payment gateway, and no automatic billing of any kind. Payment status (Unpaid/Paid/Refunded) is a manual record admins update themselves after collecting cash, purely for your own bookkeeping.

There are also currently no automatic email notifications for orders or deliveries — the only automated emails in the system are the standard account ones (sign-up confirmation and password-reset links).

18. Security & who can do what

ACTION	CUSTOMER	ADMIN
View own orders/subscriptions	Yes	Yes (all customers')
View another customer's orders/subscriptions	No — not even by guessing an ID	Yes
Change an order's status	No	Yes
Pause/resume/cancel own subscription	Yes	Yes
Reactivate a cancelled subscription	No	Yes
Set a subscription item's price	No — always taken from the live product price	N/A — same rule applies to admin-triggered delivery generation
Manage products/categories/plans	No	Yes

Every one of these rules is enforced twice: once by the website itself, and independently again by the database — so even a technically-minded customer poking directly at the system's back end cannot do anything beyond what's listed above for "Customer."

19. Known gaps & recommended next steps before full public launch

At a glance — everything that is **not** available today:

GAP	NOTES
Online payment (card/wallet/bank)	Not part of the system at all, by design — Cash on Delivery is the only payment method for both orders and subscription deliveries. This was never in scope; it isn't a bug, but flagging it here since it's the single biggest thing a growing business usually wants next.
Admin screen for Customers	Sidebar item opens a placeholder. Customer accounts themselves work fine — there's just no directory/list screen for them yet.
Admin screen for RO Plants	Sidebar item opens a placeholder. The plant data and delivery-radius logic are fully working — only the management screen is missing (see Section 15).
Admin screen for Settings	Sidebar item opens a placeholder. No store-wide configuration screen exists yet.
Automatic subscription billing/ordering	Every subscription delivery must be generated manually by an admin, one at a time (Section 14) — there is no cron job or scheduler creating them automatically.
Order/delivery notifications	No email or SMS is sent for order confirmations, status changes, or delivery reminders. The only automatic emails are Supabase's built-in signup-confirmation and password-reset emails.
Stale website copy	The Contact page still says online ordering isn't live, and the Subscription info page's buttons link to Contact instead of the real Subscribe page — both are one-line content fixes, not functional bugs.
RO Plant's exact location	The one plant currently in the database uses a general Nazimabad-area placeholder pin, not a confirmed exact address/GPS point (Section 15).

Recommended next steps, in a sensible order to tackle them:

- 1 Decide if/when you want online payment** (card, wallet, or bank transfer) added alongside Cash on Delivery. This is the largest piece of new work in this list — everything else here is a smaller addition to what already exists.
- 2 Update stale wording on two pages:** the Contact page still says online ordering isn't live, and the Subscription info page's buttons link to Contact instead of the real Subscribe page. Both are simple one-line/one-link content edits.
- 3 Confirm and correct the RO Plant's exact location** (currently a Nazimabad-area placeholder pin) and decide on its radius/whether a second plant is needed to properly cover Orangi Town and Allama Iqbal Town (Section 15).
- 4 Build the RO Plants admin screen** so plant locations and radii can be managed without a developer each time.
- 5 Build the Customers admin screen** for a searchable customer directory.
- 6 Build the Settings admin screen** once you know what store-wide options you want to control (e.g. delivery fee, contact details shown on the site).

- 7 **Decide on a process for generating subscription deliveries on time** — since this is a fully manual, per-subscription click today (Section 14), consider a simple weekly/monthly reminder for whoever runs the admin dashboard.
- 8 **Consider order/delivery email or SMS notifications** for customers, since none exist today beyond account-related emails.

NOTE — None of the items above are bugs — the system behind every one of them (data, security rules, the underlying database logic) is already built and working. What's listed here is dashboard screens and content polish still to be added, plus one data-accuracy item (the plant's exact pin) to confirm with your team.

20. End-to-end testing guide — walking one order and one subscription through the whole system

This is a step-by-step dry run you (or anyone on your team) can do right now, on the real live site, to see the entire system working together — a customer placing a normal order, a customer starting a subscription, and exactly where and how each one shows up on the admin side afterward. Do this with a real phone/email you control, not a customer's real account.

Before you start

NOTE — You'll need an admin login already (Section 9) to see the admin side of each step. If you don't have one yet, ask your developer to grant admin access to an account you control.

IMPORTANT — Use an address inside the currently-covered area for this test — roughly Nazimabad, Paposh Nagar, North Nazimabad or Sakhi Hasan (within about 7km of the Nazimabad RO plant). An address further out (e.g. deep in Orangi Town or Allama Iqbal Town) may correctly get rejected as "not deliverable yet" — see Section 15 — which is expected behaviour, not a fault, but it will stop this test partway through.

Part A — Create the test customer account

- 1 Open the website in a normal (or incognito/private) browser window, go to Sign Up, and create a new account with a real email you can access, e.g. `testcustomer+aeraf@yourdomain.com`. Fill in full name, email, password.
- 2 If a "check your email" screen appears, confirm the account from that email, then log in. If you're taken straight into the account instead, you're already logged in.
- 3 Go to My Account → Manage Addresses → Add Address. Fill in recipient name, phone, and address line, then click **"Use my current location"** (or manually enter a latitude/longitude inside the covered area) so the address has a real location pin. Save it, and tick "Set as default" if you like.

Part B — Place a normal Cash-on-Delivery order

- 1 Go to the RO Water (or Hair Oil) page and click **Add to Cart** on any in-stock product.
- 2 Open the Cart, confirm the item and quantity look right, and click **Proceed to Checkout**.
- 3 On the Checkout page, select the test address you just added. It should show as deliverable (no warning). If it shows as not deliverable, the location pin is outside the covered radius — edit the address and adjust it.
- 4 Leave a note if you want (e.g. "TEST ORDER — please ignore"), confirm Cash on Delivery is shown as the payment method, and click **Place Order**.
- 5 You should land on the order confirmation page with a real order number (e.g. `AL-000001`), the item, total, and delivery address.

Where this shows up in admin

- 1 Log into `/admin/login` with your admin account (in another browser/window, so you stay logged in as the test customer too, if you want to compare).
- 2 Go to **Admin** → **Orders**. Your test order should be at the top of the list, with status **Pending** and payment status **Unpaid**, showing the test customer's name and the RO Plant it was assigned to.
- 3 Open the order to see the full detail — line items, address, and the live "currently in/outside delivery range" badge.

Part C — Start a test subscription

- 1 Still logged in as the test customer, go to `/subscribe`.
- 2 Choose the "Monthly RO Water Delivery" plan, choose the RO Water product and a quantity, and choose the same deliverable test address.
- 3 Confirm the computed monthly price looks right, then submit.
- 4 You should be redirected to My Account → Subscriptions, where the new subscription now appears with status **Active** and a "Next delivery date" about one month from today (or sooner, if the plan's frequency is weekly/fortnightly).

Where this shows up in admin

- 1 Go to **Admin** → **Subscriptions**. The test subscription appears in the list with the test customer's name, the water item/quantity, monthly price, and next delivery date, status **Active**.
- 2 Open it to see the full detail page (address, notes, live delivery-range badge).

Part D — Generate the subscription's delivery (the manual step, Section 14)

- 1 On that subscription's detail page in admin, click "**Generate This Month's Delivery.**"
- 2 Go back to **Admin** → **Orders** — a second test order now appears, marked with the note "Subscription delivery," for the same customer/address/product.
- 3 Back on the subscription's detail page, the "Next delivery date" has moved forward by one plan cycle (e.g. one month later than before).

NOTE — This confirms the full loop: a subscription never creates its own orders by itself — the "Generate This Month's Delivery" click is what turns a subscription into a real, fulfillable order each cycle. In real use, you'd repeat this one click per active subscription every time that customer's delivery is due (see the recommendation in Section 19 about setting yourself a reminder for this).

Part E — How to proceed from here (normal day-to-day flow)

- 1 As each test order physically goes out for delivery, update its **Order Status** in admin: Pending → Confirmed → Processing → Out for Delivery → Delivered, at whichever pace matches reality.
- 2 Once the delivery person collects the cash, set that order's **Payment Status** to **Paid** — this is just your own bookkeeping, since there's no payment gateway involved.

- 3 For the subscription, repeat Part D's single click on its due date every cycle, for as long as the customer stays subscribed. If they ask to pause, resume, or cancel, they can do that themselves from My Account → Subscriptions — or you can do it for them from the subscription's admin detail page.
- 4 If an order or subscription needs to be stopped (e.g. wrong address, customer changed their mind), use Cancelled status on the order, or Cancel on the subscription — both are one click.

Cleaning up after this test

IMPORTANT — Everything created in this walkthrough (the test account, address, order(s), and subscription) is real data in your live database — it isn't automatically temporary. Once you're satisfied the test worked, either leave it as harmless sample data, or ask your developer to remove the test customer account, its addresses, orders and subscription directly from the database (there's no "delete account" button in the dashboard yet — see the Customers gap in Section 19).
